

Building and Deploying a Serverless Mini Application with AWS Lambda and API Gateway

Architecture (what we are building)

- AWS Lambda → runs your code
- API Gateway → gives you a public URL to access the app

Step 1 — Sign in to AWS Console

Go to:

<https://aws.amazon.com/>

Click:

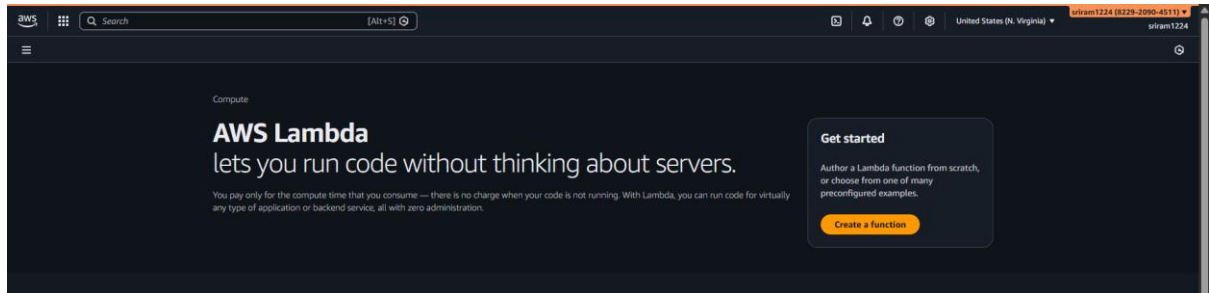

- **Sign in to Console**
 - Login with your credentials
-

Step 2 — Go to AWS Lambda

In the search bar at the top, type:

Lambda

Click on **Lambda** service.

You will see a dashboard like this:

- Create function
- Functions list

Step 3 — Create a New Lambda Function

Click:

-> **Create function**

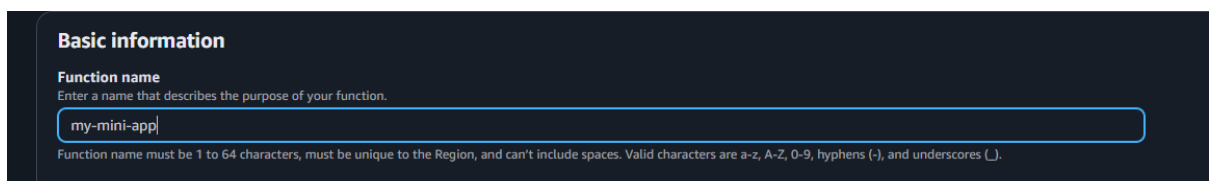

Choose:

- **Author from scratch**

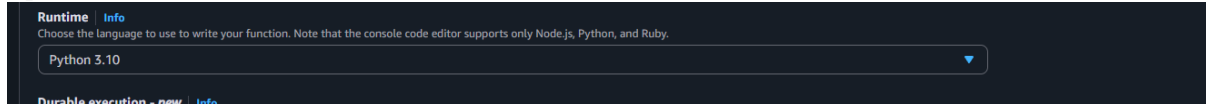

Fill in:

- Function name: my-mini-app

- Runtime:

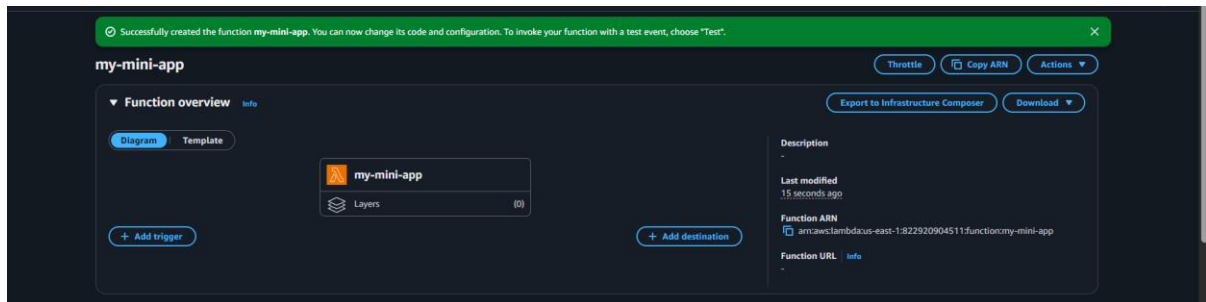

Python 3.9 (or latest available)

Leave other settings default.

Click:

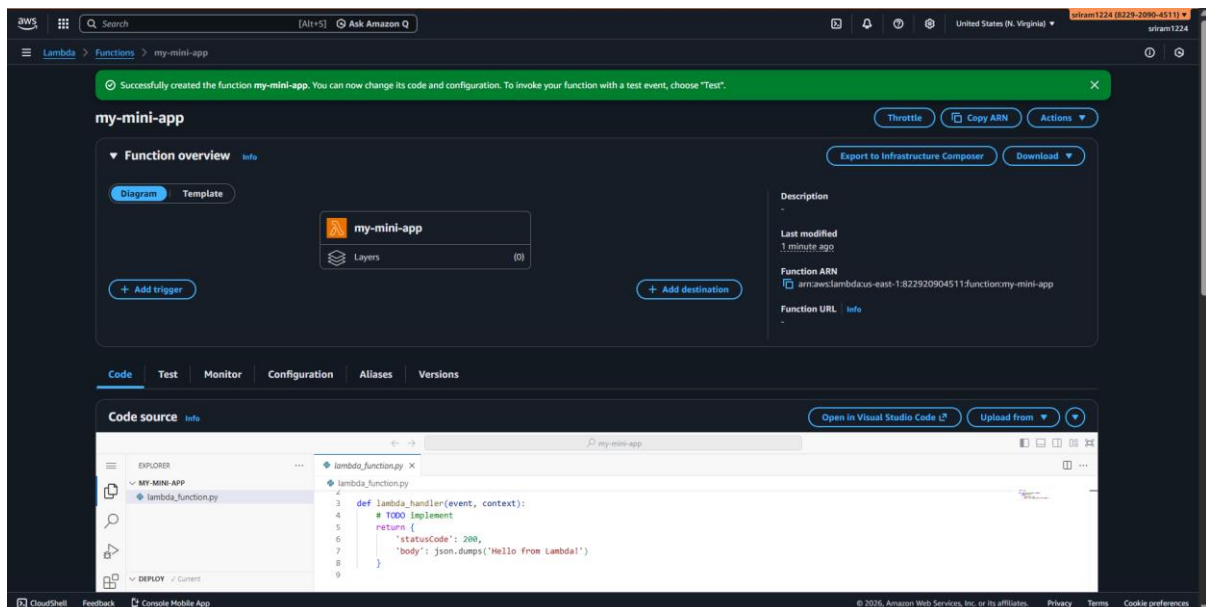

-> **Create function**

Step 4 — Add Application Code

You will now see:

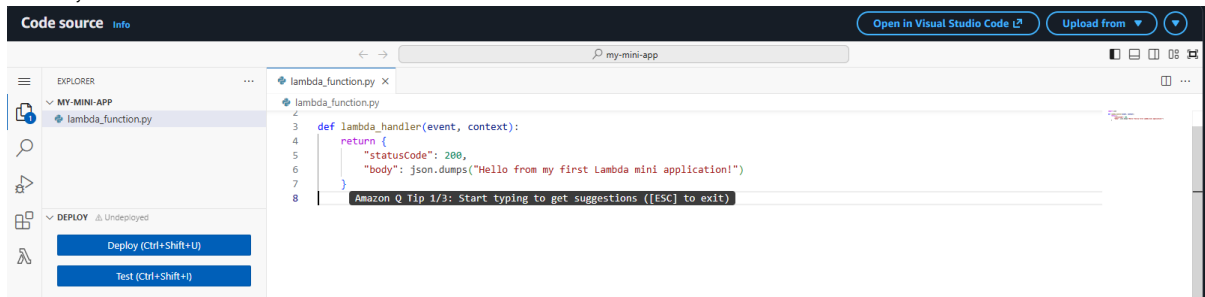

- A code editor in the browser

Delete the existing sample code.

Copy and paste this code:

```
def lambda_handler(event, context):
    return {
        "statusCode": 200,
        "body": "Hello from my first Lambda mini application!"
    }
```

Click:

 **Deploy**

Step 5 — Test the Lambda (Before API)

At the top of the page, click **Test**.

In the popup:

- Event name: `test`

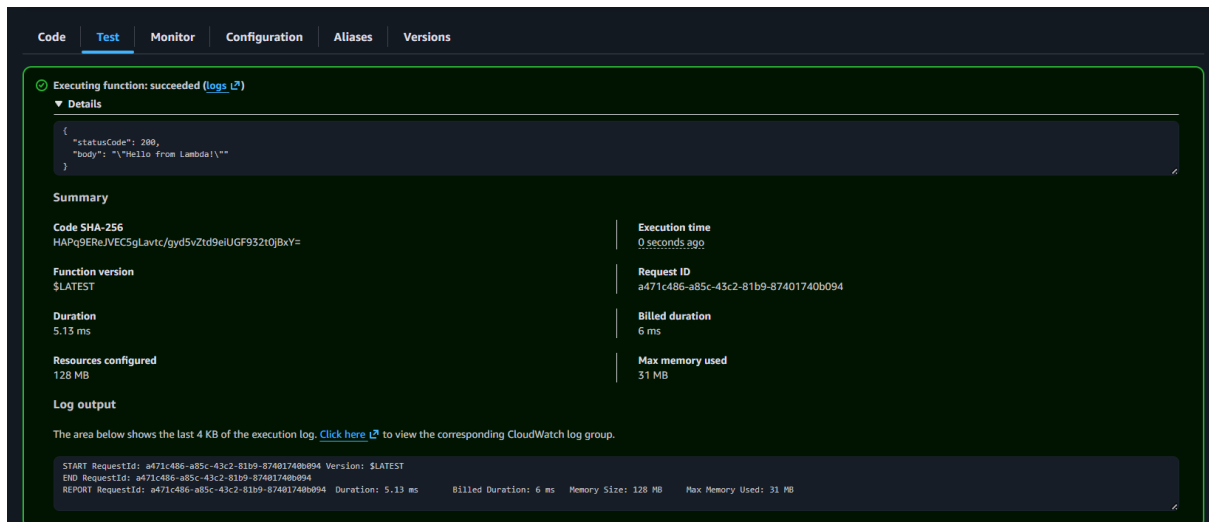

Click **Save**, then click **Test** again.

You should see output like:

```
{
  "statusCode": 200,
  "body": "\"Hello from my first Lambda mini application!\""
}
```

If you see this, your function logic is correct.

Step 6 — Add API Gateway (Make it a real app)

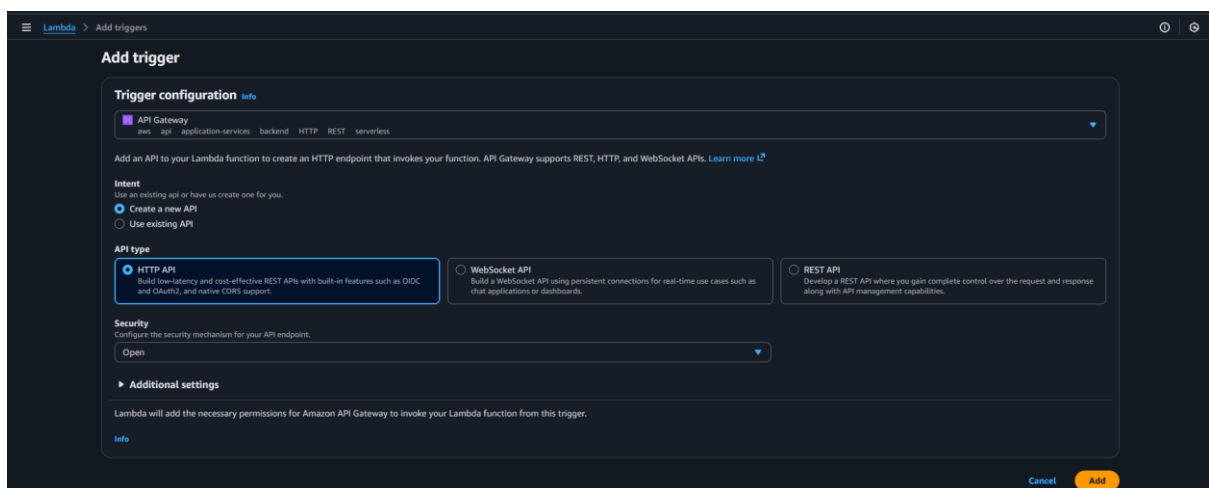

Now look at the left side of your screen.

Click:

☞ **Add trigger**

From the list, select:

☞ **API Gateway**

Choose these options carefully:

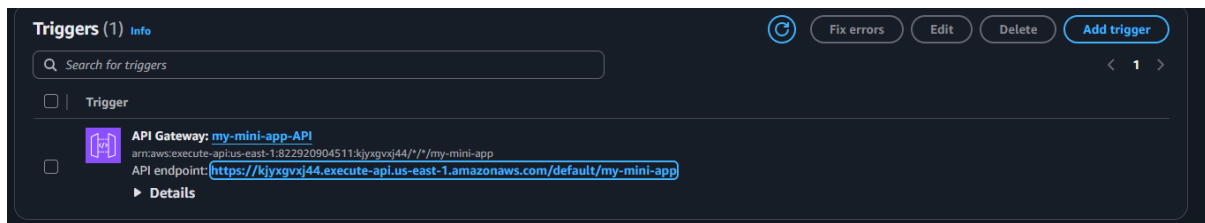

- API type → **HTTP API**
- Security → **Open (no auth)**
- Click **Add**

AWS will now automatically create an API Gateway for you.

Step 7 — Get Your Public URL

After a few seconds:

1. You will see a new box under your Lambda diagram that says **API Gateway**
2. Click on it

3. You will see a **Invoke URL** like:

`https://abcd1234.execute-api.us-east-1.amazonaws.com`

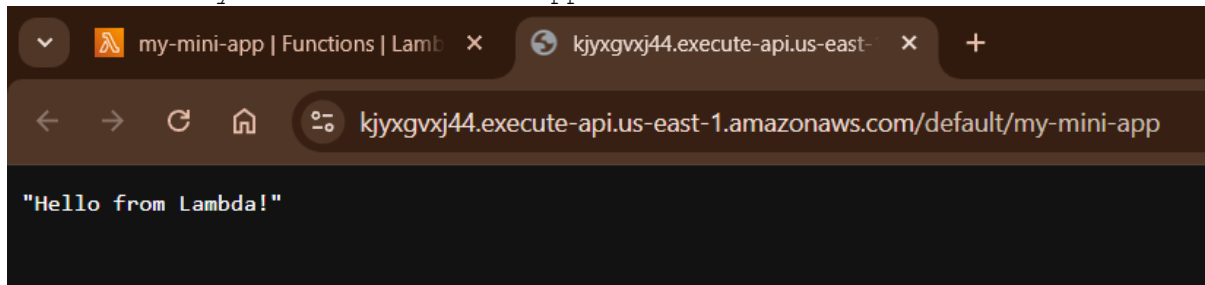

Copy this URL.

Step 8 — Test Your Mini Application in Browser

Open a new tab and paste the URL.

You should see:

"Hello from my first Lambda mini application!"

Now your application is **LIVE** on AWS Lambda.
